

# DRONE INSPECTION IN OIL AND GAS

Because safety is paramount to the Oil & Gas industry and because this industry is facing more and more cost pressure, our customers are turning to innovative solutions allowing them to improve the quality of their inspection and preserve their assets. By choosing Elios 2, they are increasing the safety of their workers while cutting inspection costs by performing more thorough and frequent visual inspections and benefiting from a visual support for a better maintenance planning.

## OFFSHORE RIGS, JACKUP, AND DRILLING SHIPS

Checking the inside of ballasts and tanks for possible anomalies of the structures on offshore rigs, FPSOs, drilling ships or oil tankers.

## FCC AND COKERS

Performing the visual inspection of critical production units of petroleum refineries such as Fluid Catalytic Cracking and Cokers.

## STORAGE TANK

Looking for cracks and corrosion on rafters, walls, and roof sections of storage tanks during integrity-assessment turnaround, by performing close visual inspection beyond line of sight.

## CHIMNEY/ SMOKESTACK

Performing a General Visual Inspection to detect cracks and anomalies on the inside of a sky-high chimney within an oil refinery.
